Multiple precip gage inputs
Posted by astewart - 2008/09/24 01:09

_____

I'm seeking a precip data processing tool you mention in the documentation/help files under Kineros/Multiple gage inputs as:

"This process is based on the Perl script previously available in the datafiles download from the AGWA website"

I've looked through the data files and can't figure out where/what it is. Can you please point me to the location and name of this tool?

Thanks

_____

Hi Anne,
It's not available in the datafiles anymore because the functionality was built into AGWA 1.5. It is accessed via the 'Write KINEROS Precipitation File' command on the AGWA menu-just select 'Generate precipitation files from observed data'.
